SOLUTIONS FOR NON-PROFITS

The constant challenge of running a non-profit organization is operating on a tight budget, often with a small staff—while continuing to deliver on promises to the people you serve. And since no two non-profits are alike, requirements can vary greatly, and each organization has unique problems to solve. The right technology—designed and implemented by an expert partner—can help meet those needs.

Financial & Supply Chain Management

Like other businesses, non-profits face challenges like inconsistent funding and tight budgets. But they also deal with ever-shifting supply chains, lack of technology, and drastically changing economic and political conditions. They need to optimize their financial and supply chain management within tight budgets and with limited resources. AKA's solutions for Financial & Supply Chain Management bring these two functions together into a single system, enabling non-profit organizations to increase efficiency while maintaining quality and ensuring compliance.

Constituent Management

Non-profit organizations depend on the generosity of donors and volunteers. If they are unable to attract donors and volunteers and keep them engaged and involved, they risk losing a valuable workforce and badly needed funds. You need a solution that enables you to maximize these relationships. AKA's solutions for Constituent Management (Donors, Volunteers, Partners, Employees) utilize Cloud technology to support critical functions.

Grant Management

Grants are a key function of many non-profit organizations and are often the primary source of funds for programs. But the process of tracking grants can be challenging—and you risk losing those grants if you are not able to show where the money is going. AKA's solutions for Grant Management enable organizations to track and report on grant funding, complying with requirements from the local to Federal level, such as single audits (OMB A-133).

Social Services Case Management

Social services programs administered by non-profits and the types of funding organizations they work with use different processes and systems for managing cases, participants, and outcomes. Outdated systems can exacerbate the complications caused by a network of care and funders that rely on multiple processes and systems—negatively impacting the level of care and outcomes. AKA's solution for Social Services Case Management is an integrated client and case management framework designed to support the complete client lifecycle through request, receipt, and follow-up of services.

AKA CONTACTS

Our clients trust our non-profit experts only because of our deep understanding of today's technologies, but also because we know how to put them to work.

Our non-profit team—each with decades of experience—has worked closely with organizations around the world to pursue their missions.
